

FARM PLANS

Canmap Hawley Farm Plans are an important tool in managing your farm. Using accurate aerial photographs Canmap Hawley can prepare a map of your farm showing paddock extents and areas, rivers and streams, farm buildings, water troughs and lines, and many other site features.

Some of the benefits to having a farm plan created by Canmap Hawley include:

- accurate measurements of paddock and fence lines based on land based survey data;
- improved ability to calculate fertilizer and irrigation application quantities;
- better stock and feed management.

Canmap Hawley's team are experienced at creating farm plans and have done so for many years for many clients. Using our team and advice can help provide the best solution for your farm and, if you choose to develop your farm further or subdivide, we would be happy to advise you as to a way forward.
